## Discussion

The fuel oil stained soils following the pipeline to the east extends farther east than originally anticipated. Samples will be collected every 100 feet along the excavation for the fuel oil stained soil that followed the pipeline to the east, per the 9/17/04 contact record. We will collect samples at the east end of the excavation. 1A-2333

We will take a TPH sample at depth south of Valve Vault 16 where the heaviest oil concentration was found and removed.

Due to the discovery of an additional spill area immediately north of the oil contaminated soil that followed the steam line to the east. This area was approximately oval in shape about 35 ft. long in the east-west axis and 20 ft wide in the north-south axis. The oil-stained soil was removed in this area, and in essence widened the steam line soil removal trench. The oil-stained soil was generally 12 to 18 inches below the surface and ranged from 5 to 15 inches thick. Samples will also be taken in the center, north side and at the eastern point of this spill area.
